TECHNOLOGIES	SKIER BENEFIT
BI-INJECTED FIXED TONGUE	The new bi-injected fixed tongue is designed to have softer plastic in the areas that deforms the most when walking. This allows the skier have VERY FAST WALK/SKI OPERATIONS and <u>viceversa</u>
IMPROVED BUCKLES	Improved buckle functionality: the <u>Dynalink</u> is fixed coaxial to the pivot and the heel hold back is more efficient because the buckle really works at 45°. The lower buckle provides a better precise forefoot closure.
DYNALOCK BUCKLE	The new <u>Dynalink</u> engages the base of the lever and only disarms when you try to rotate the articulated tail.
NEW WALK MECHANISM	The forward inclination of the cuff can be adjusted thanks to the rear insert which can be easily unscrewed with a screwdriver (12°-14°)
50 MM POWERBAND	The elastics of the booster are sewn into a tubular elastic band resulting in a clean and compact design: this feature enhance the progressiveness and kinetic response of the ski boot
SUSTAINABILITY AND <u>PuRE</u> TECHNOLOGY	The materials used for the outer upper of the liners are of recycled origin, and a strong outer layer of recycled PU also ensures direct energy transmission to the shell.
